\* Installation does not include a router or associated configuration. Webformix does not require the use of a specific router, and customers are welcome to provide their own as long as they are comfortable setting it up, putting a password on it, and keeping the firmware up to date. Alternatively, we sell wireless routers for \$75, and this includes set up, support, and warranty. We will replace a faulty router for free during the first year, and at our cost in the following years for as long as someone remains a customer.

\*\* We do require that our equipment be plugged into a surge protector (not just a power strip!) to reduce the chance that it is destroyed by lightning or other power surges. The customer is welcome to provide the surge protector they would like us to use at the time of installation. Alternatively, they can be purchased from us for \$10.

Q. When is my payment due?

A. Your bill date is the same day as you were installed. You pay your first month at time of installation. Invoices are for the upcoming month. While invoices are due on the date on them, there is a 30 day grace window before service is automatically suspended.

Q. Do you offer autopay?

A. Yes! You can visit our website at [Webformix.com/new\\_payment.php](http://Webformix.com/new_payment.php) and check the “Sign up or change recurring autopay” option at the top. Or you can call the office and we can get it set up for you!

Q. Can I get a paper invoice in the mail?

A. Typically we invoice via email. We can send a paper invoice, however, we do add a \$1 Save-a-Tree-Fee for this service.

Q. Am I locked into anything?

A. Absolutely not. We have no contracts. You can change your plan with a phone call.

Q. Do you have a Snowbird Policy?

A. Yes! If you're going to be gone for a month or more, contact us before you leave to have your service suspended, and the cost reduced to \$10/mo while you're gone.

Q. What if I need help?

We have many troubleshooting tools at our disposal and want to make your internet experience as smooth as possible. If you require assistance, please don't hesitate to get in touch! Alternatively you can email [support@webformix.com](mailto:support@webformix.com), or visit our website, click the “contact us” button at the top, and fill out a contact form.

Q. What is a NAT error on my gaming console?

A. A NAT type of 'Strict' is caused by the topology of our network and may impact gaming with other users that also have a 'Strict' NAT type. The most direct solution to this problem is to utilize a Static IP.

Q. What is a public, static IP and why would I need one

A. A public, static IP is a special type of connection that allows direct access to your home network from elsewhere in the world. A static IP is usually used to access a VPN server located in your home or a system such as security cameras.

## Basic Home Network Configuration & Troubleshooting

## Bypassing the Wireless Router

If you have lost your internet connection, or your internet speed is slow, we may ask you to bypass your Wireless Router. To do this, unplug the power cable on the router, then connect one of your computers directly to the POE (power supply/plug-in) with an Ethernet Cable. The diagram below shows what this looks like. This will help us determine if the Wireless Router is the cause of the problem.

## The Power Over Ethernet (POE/Power Supply) Adapter

The function of the POE (power supply) is to provide power to the antenna/radio outside and to carry data between the radio and your computer or router. If any of the connections are not secure, your internet service may not work. Please Note: If you plug your computer or router into the port for the radio (labeled 'Gigabit DATA+POWER'), you could possibly damage the equipment. The type of wire that connects the POE (power supply) with your computer or router, and connects the POE (power supply) to the radio, is called CAT5 or Ethernet Cable.

It looks like this:

## Power Cycling the POE

If you experience a loss of service, the first step to take is to Power Cycle the antenna/radio. To do this, remove the power cord from the POE. Wait 30 seconds and then plug it back in. If this corrects the issue, service will return in 5-15 minutes. In many cases, it's a good idea to power cycle your router as well. This can be done by unplugging the power cord from your router for about 30 seconds. Do NOT press any 'RESET' button on the router, as this will reset configuration. **POE and cables should be arranged as pictured.**
