A little about us

Webformix is a fixed wireless internet provider founded in 2004 and headquartered in Bend, Oregon. We're a team of locals who provide high speed internet to rural and suburban communities in Central and Southern Oregon.

We're a small business that serves our friends and neighbors, and we take great pride in being part of the community. We're the highest rated internet provider in Central and Southern Oregon, with a Google business rating of 4.8 stars. We offer high speed internet for rural and urban areas, with local tech support available 7 days a week.

We offer plans with **no contracts, data caps or hidden fees**. We stand behind our service with our **30-day Money Back Guarantee**. If our client is not happy with service and they cancel within the first 30 days, we'll **refund the entire cost** of installation and the cost of their first month's service. **Our goal is to let people know that there is a better alternative to the big cable companies**, and that high speed internet can include **excellent customer service**.

Webformix Residential Internet

If you choose to be a referral agent with Webformix, we ask that you call the sales department and provide basic information about your clients such as address and phone number, and internet connection needs. This is also in your best interest as clients often don't remember to mention who sent them.

After receiving your call, we check to see if the location would be able to get service. We then reach out to the client after reviewing their location. Typically a **free site survey** is necessary to verify the connection as we are a wireless internet provider. Our service works best when there are few/no obstructions between the equipment we mount, and our transmitters on various communication towers in the area.

The client does not need to be home for us to accomplish the site survey test, we just need access to the property (outside only). Additional equipment could be necessary depending on the structure and client needs. Clients do need to have a router that is compatible with ethernet cables. 2-in-1 modem-routers will not be compatible with our cables and equipment. If we are able to provide service after the site survey verification, fees are due at the time of install. The best form of payment at the time of install is by cash or check as anytime we process a card it accrues an additional 3% fee for the client.

Once a new client makes it out of their 30-day money-back guarantee period, you will receive a \$100.00 check.
